The business intelligence platform you need to make smarter IT decisions

You need accurate data and insights to effectively manage your IT environment. More than just assessing what you have, you need to be able to

✓ Know what you have, how it's being used, by whom and when
✓ Plan for cloud migrations efficiently and effectively
✓ Optimize current infrastructure
✓ Reduce subscription software costs
✓ Secure access to your environment
✓ Monitor everything from a single dashboard
✓ Have real-time visibility into your entire environment at all times

Movere is a multi-dimensional SaaS platform that increases business intelligence by accurately presenting entire IT environments within a single day. Our platform allows you to discover, prepare for the cloud, and optimize with confidence as your organization grows & changes, regardless of platform, application or geography. Movere’s self-discovering bots identify users, applications and resource consumption intelligently and geospatially — whether on-prem or in the cloud — to immediately give you the visibility and control you need to be effective. There is no software installation, no trace of Movere’s presence left in your environment. It simply scans, gathers, and reports on 100% of everything that exists in your IT environment — and it does it all at a rate of up to 1,000 servers per hour making it possible for most enterprises to access this information with a single day.

“After rapid deployment and within only an hour of scanning, Movere was able to discover 25% more servers than originally thought were in our environment, uncovering some environments that were offline, expired, or retired, and provided a clear understanding of devices the team was unaware even existed.”

“We now have a platform to reference for application dependency mapping, actual resource consumption, optimization and modernization opportunities, and business intelligence that allows us to make the best decisions throughout our 3-year cloud migration plan.”

Movere uses associative dimensioning to eliminate the need for you to rationalize various data points from multiple sources. It gathers data from Windows and Linux, Azure and AWS, SAM tools, databases and more — and then surfaces them into a dashboard that can be customized by individual user. Movere provides a high-level overview in the dashboard — however, simply clicking on any data point can reveal more information all the way down to the the IP address, database — even individual user level — with a simple click of a button giving you the insights you need to make smart decisions.

Scanning your environment regularly with Movere allows you to have access to all of this data in real-time as your organization grows and changes. Because Movere is always current, it eliminates the need to repeatedly spend time manually gathering and integrating point-in-time data from independent sources simply to understand how the dynamics of your IT environment have changed — Movere can do that with each discovery cycle in a matter of hours and it continues to learn your environment while eliminating duplicative data points to ensure users have access to the most accurate, reliable and actionable data.

Movere provides enterprise IT departments with an unprecedented level of visibility into their environments, enabling them to have the control and actionable insights needed to make smart decisions.
